20140916 PriorityMHs toEPA.PDF

Hi Mike and Alison,

In addition to the priority Manholes we listed, we are adding sewer manhole F5-060 and storm manhole F5-066, which are located at the intersection of Evandale and Leong Dr. Verifying these depths would allow verification of sewer line gradients across Evandale from Whisman to Leong.

Keith and I will see you at 10 am at 850 Leong parking lot tomorrow (Thursday). We would appreciate the City's help in obtaining the measurements to field verify.

If anything comes up, I can be reached at 415.972.3141.

Thanks,

Alana

Subject: EPA Updated Information Request - Manhole Information

Hi Mike and Alison,

Attached is a list of the manholes (sewer and storm) located in the areas of the four TCE hotspot areas. We have grouped them within the Evandale and Gateway Easement. We included manhole and pipe invert depths (where available) from the GIS data, City maps and as-builts the City provided. We elected to leave out the various reports which did not come from the City. As you can see, the level of discrepancies vary from manhole to manhole, but all seem to have some level uncertainty.

When we meet on Thursday, Sept 25, we would like to try to verify to the extent possible the depths to MH inverts. We recognize these are not surveyed elevations, but we may be able to get a sense of some the discrepancies.

Please let me know if you have any questions/thoughts.

Thanks!

Alana
